RETHINKING THE POTENTIAL OF PLASTICS

Breathing new life into plastic waste is harder than it seems. Much of what's recycled ends up in landfills and incinerators or is mechanically chipped and recycled into new products that don't always have the durability needed for daily use. There is science in the solution. Polyester Renewal Technology (PRT) is more effective than mechanical recycling and produces new material that is made with 50% recycled content. Less virgin plastic needed for new products means saving precious environmental resources. Our line of everyday water bottles is now made with Tritan[™] Renew – an innovative plastic that utilizes 50% recycled material in place of fossil-based resources. Tritan[™] Renew is highly durable, dishwasher safe, and free of BPA, BPS, and BPF chemicals. Our reusable bottles made better.
